

# RIDGEGEAR TRAINING COURSE

## Emergency rescue / evacuation (RGT2)

### Course

This full day training course provides the core knowledge required to select, inspect, set up and use safety harnesses and emergency descent equipment for either Rescue or evacuation

### Course objectives

To enable a delegate to select, setup, inspect and use the following items of rescue/evacuation equipment. Delegates must have successfully completed a recognised safety harness course.

- (1) RGR3 VRS Assent and Descent rescue system.
- (2) RGR4 Descent only rescue system.
- (3) RGR10 Lightweight Emergency Descent Control System.

### Who will benefit?

All those in your organisation involved in planning, carrying out, supervising and managing rescues from height in the work place.

### Course content

- This course incorporates the RGT1 course
- Requirements for rescue (Work at Height Regulations 2005).
- Contents of rescue systems
- Site considerations (anchor points, drop zones, general observations)
- Pre-use inspections & function checks (including practical session)
- Setting up of equipment (including practical session)
- Using equipment for evacuation and rescue (including practical session)

### Training methods

Lectures, printed course material, practical demonstrations and hands-on exercises in inspecting, checking, setting up and using evacuation and rescue equipment using our specially built rescue training rig.

### Certification

Successful delegate will receive a RIDGEGEAR certificate on completion.

### PPE requirements

Trainees should provide their own safety footwear.

### Course duration/Number of delegates

The course is designed for up to 6 delegates at any one time and is held over one full working day, typically 09:00 - 16:00.
